

Assignment-3.2

Name:T.Ananya

Hallticket:2303A51128

1)

Code:

```
def calculator():

    print("Simple Calculator")

    while True:

        # Input numbers with error handling

        try:

            num1 = float(input("Enter first number: "))

            num2 = float(input("Enter second number: "))

        except ValueError:

            print("Error: Please enter a valid number.")

            continue

        # Input operator

        operator = input("Enter operator (+, -, *, /): ").strip()

        # Perform calculation

        if operator == '+':

            result = num1 + num2

        elif operator == '-':

            result = num1 - num2
```

```
elif operator == '*':
    result = num1 * num2

elif operator == '/':
    if num2 != 0:
        result = num1 / num2
    else:
        print("Error: Division by zero is not allowed.")
        continue

else:
    print("Error: Invalid operator.")
    continue

print(f"Result: {result}")

# Ask if the user wants to continue
again = input("Do you want to perform another calculation?
(y/n): ").strip().lower()

if again != 'y':
    print("Goodbye!")
    break

# Run the calculator
calculator()
```

Output:

```
/ai_coding/New folder/ass_3.py"
Simple Calculator
Enter first number: 2
Enter second number: 3
Enter operator (+, -, *, /): +
Result: 5.0
Do you want to perform another calculation? (y/n): n
Goodbye!
```

2)

Code:

```
def sort_students(students):

    # Sort by marks (descending), then by name (ascending)
    return sorted(students, key=lambda x: (-x[1], x[0]))

students = []

n = int(input("Enter number of students: "))

for i in range(n):

    name = input(f"Enter name of student {i+1}: ")

    marks = int(input(f"Enter marks of student {i+1}: "))

    students.append((name, marks))

sorted_students = sort_students(students)

print("\nSorted Student List:")

for name, marks in sorted_students:

    print(name, marks)
```

Output:

```
Enter number of students: 4
Enter name of student 1: ananya
Enter marks of student 1: 98
Enter name of student 2: pooja
Enter marks of student 2: 98
Enter name of student 3: hasini
Enter marks of student 3: 40
Enter name of student 4: nandini
Enter marks of student 4: 20

Sorted Student List:
ananya 98
pooja 98
hasini 40
nandini 20
```

3)

Code:

```
def is_prime(n):

    # Handle edge cases

    if n <= 1:
        return False

    if n == 2:
        return True

    if n % 2 == 0:
        return False

    # Check divisibility up to sqrt(n)

    for i in range(3, int(n ** 0.5) + 1, 2):
        if n % i == 0:
```

```
        return False

    return True

# Taking input from user

num = int(input("Enter a number: "))

if is_prime(num):

    print("Prime")

else:

    print("Not Prime")
```

Output:

```
PS C:\Users\varanya\Downloads\Python\Primes> python prime.py
Enter a number: 3
Prime
PS C:\Users\varanya\Downloads\Python\Primes>
```

4)

Code:

```
def calculate_grade(percentage):
